## **LIFE SCIENCES**

### **EXAMINATION GUIDELINES**

#### **GRADE 12**

**2011**

**This guideline consists of 28 pages.**

## INTRODUCTION

This Examination Guideline for 2011 is designed to provide clarity on the depth and scope in terms of the content to be taught, learned and assessed in Grade 12 in 2011. This must be read in conjunction with the following documents

- (i) NCS - Grades 10-12: Subject Assessment Guidelines - Life Sciences (2008)
- (ii) NCS - New Content Framework in Life Sciences - Strands Document - (2007)

This examination guideline consists of the following:

- 1.1 Weighting of the Learning Outcomes for Grade 12 from 2011
- 1.2 Sequence and Weighting of Strands/Knowledge Areas for Grade 12 from 2011
- 1.3 Weighting of Cognitive Levels for Grade 12 from 2011
- 1.4 Format of the Examination Question Paper for Grade 12 from 2011
- 1.5 Life Sciences Grade 12 Suggested Year Planner
- 1.6 Elaboration of Content

### 1.1 WEIGHTING OF THE LEARNING OUTCOMES FOR GRADE 12 FROM 2011

| Learning Outcome 1 | Learning Outcome 2 | Learning Outcome 3 |
|--------------------|--------------------|--------------------|
| 30%                | 60%                | 10%                |

### 1.2 SEQUENCE AND WEIGHTING OF STRANDS/KNOWLEDGE AREAS FOR GRADE 12 FROM 2011

|         | Grade 12                                      | Percentage (%) |
|---------|---|----------------|
| Paper 1 | Life at molecular, cellular and tissue levels | 60%            |
|         | Diversity, change and continuity              | 40%            |
| Paper 2 | Life processes in plants and animals          | 60%            |
|         | Environmental studies                         | 40%            |

### 1.3 WEIGHTING OF COGNITIVE LEVELS FOR GRADE 12 FROM 2011

| Category Reference | Level               | Cognitive Levels                   | Percentage |
|--------------------|---------------------|------------------------------------|------------|
| A                  | Lower Order (60%)   | Knowledge                          | 30         |
| B                  |                     | Comprehension                      | 30         |
| C                  | Higher Order (40 %) | Application                        | 20         |
| D                  |                     | Analysis, Synthesis and evaluation | 20         |

**1.4 FORMAT OF THE EXAMINATION QUESTION PAPER FOR GRADE 12 FROM 2011**

| <b>Sections</b> | <b>Types of questions</b>   | <b>Marks</b> |
|-----------------|---|--------------|
| A               | Short answer, objective questions such as MCQ, terminology, columns/statements and items  | 50           |
| B               | A variety of questions types:<br>2 questions of 30 marks each, divided into 3 – 4 subsections   | 2 x 30       |
| C               | Consists of two parts: <ul style="list-style-type: none"><li>• Data-response questions</li><li>• A mini-essay (may address one or more learning outcomes)</li></ul> | 20<br>20     |

## 1.5 LIFE SCIENCES - Grade 12

## Suggested Year Planner

YEAR: \_\_\_\_\_

| Week          | Planned Date<br>(week ending) | Completion Date<br>(week ending) | Topic for the week  |
|---------------|-------------------------------|----------------------------------|---|
| <b>TERM 1</b> |                               |                                  |   |
| Week 1        |                               |                                  | DNA structure, replication  |
| Week 2        |                               |                                  | RNA, protein synthesis, mutation                                    |
| Week 3        |                               |                                  | Meiosis   |
| Week 4        |                               |                                  | Genetics  |
| Week 5        |                               |                                  | Genetics  |
| Week 6        |                               |                                  | Genetics  |
| Week 7        |                               |                                  | Evolution: origins  |
| Week 8        |                               |                                  | Evolution: natural selection and speciation                         |
| Week 9        |                               |                                  | Evolution: evidence   |
| Week 10       |                               |                                  | <i>Controlled Tests</i>   |
| Week 11       |                               |                                  | <i>Controlled Tests</i>   |
| <b>TERM 2</b> |                               |                                  |   |
| Week 1        |                               |                                  | Evolution: human evolution  |
| Week 2        |                               |                                  | Evolution: evolution in present times/alternative explanations      |
| Week 3        |                               |                                  | Plant/Animal responses to the environment                           |
| Week 4        |                               |                                  | Human nervous system  |
| Week 5        |                               |                                  | Nerves, reflex arc  |
| Week 6        |                               |                                  | Eye   |
| Week 7        |                               |                                  | Ear   |
| Week 8        |                               |                                  | Human endocrine system/Homeostasis and Temperature Regulation       |
| Week 9        |                               |                                  | Revision  |
| Week 10       |                               |                                  | <i>June Exam</i>  |
| Week 11       |                               |                                  | <i>June Exam</i>  |
| <b>TERM 3</b> |                               |                                  |   |
| Week 1        |                               |                                  | Sexual and asexual reproduction/Life cycle of plants and insects    |
| Week 2        |                               |                                  | Reproduction in flowers/importance of seeds/reproductive strategies |
| Week 3        |                               |                                  | Human reproduction  |
| Week 4        |                               |                                  | Human reproduction  |
| Week 5        |                               |                                  | Population ecology: size of population                              |
| Week 6        |                               |                                  | Population ecology: trends in human population/social organisation  |
| Week 7        |                               |                                  | Community structure/Community change over time                      |
| Week 8        |                               |                                  | Revision  |
| Week 9        |                               |                                  | <i>Preparatory Exam</i>   |
| Week 10       |                               |                                  | <i>Preparatory Exam</i>   |
| Week 11       |                               |                                  | <i>Preparatory Exam</i>   |
| <b>TERM 4</b> |                               |                                  |   |
| Week 1        |                               |                                  | Revision  |
| Week 2        |                               |                                  | Revision  |
| Week 3        |                               |                                  | Revision  |
| Week 4        |                               |                                  | <i>Final Exam</i>   |
| Week 5        |                               |                                  | <i>Final Exam</i>   |
| Week 6        |                               |                                  | <i>Final Exam</i>   |
| Week 7        |                               |                                  | <i>Final Exam</i>   |
| Week 8        |                               |                                  | <i>Final Exam</i>   |
| Week 9        |                               |                                  | <i>Final Exam</i>   |

**NOTE:** The number of weeks indicated per term are applicable to 2011. This has to be adjusted according to the school calendar when planning for the subsequent years.

## 1.6 ELABORATION OF CONTENT

## TISSUES, CELLS AND MOLECULAR STUDIES

## DNA – the code of life; and RNA

| CONTENT                                       | ELABORATION/SUGGESTED SEQUENCE   | INVESTIGATIONS   |
|---|--|--|
| <b>Structure and functions of the nucleus</b> | <input type="checkbox"/> Revise the structure and functions of the following parts of the nucleus: <ul style="list-style-type: none"> <li>• Nuclear envelope with pores</li> <li>• Nucleoplasm</li> <li>• Chromosomes (chromatin network)</li> </ul>   |  |
| <b>DNA: Structure, coding and replication</b> | <input type="checkbox"/> DNA and RNA are nucleic acids consisting of building blocks called nucleotides<br><input type="checkbox"/> Location of DNA [chromosomal (genes) & mitochondrial]<br><input type="checkbox"/> History of the discovery of the DNA molecule (Watson, Crick & Franklin story)<br><input type="checkbox"/> Double helix configuration of DNA, with hydrogen and sugar-phosphate bonds<br><br><input type="checkbox"/> Three components of a nucleotide as follows: <ul style="list-style-type: none"> <li>• Nitrogenous bases linked by hydrogen bonds               <ul style="list-style-type: none"> <li>• 4 nitrogenous bases of DNA: adenine (A), thymine (T), cytosine (C), guanine (G)</li> <li>• Pairing of bases in DNA occurs as follows A : T and G : C</li> </ul> </li> <li>• Sugar portion (deoxyribose in DNA)</li> <li>• Phosphate portion</li> </ul> <input type="checkbox"/> Functions of DNA in terms of the following: <ul style="list-style-type: none"> <li>• Genes as sections of DNA, carrying hereditary information</li> <li>• Contains coded information for protein synthesis</li> </ul> <input type="checkbox"/> DNA replication under the following: <ul style="list-style-type: none"> <li>• When and where it takes place</li> <li>• Process of DNA replication (names of enzymes involved not required)</li> <li>• Significance of DNA replication</li> </ul> <input type="checkbox"/> The DNA profiling (finger-printing) with respect to the following: <ul style="list-style-type: none"> <li>• The concept of DNA profiling</li> <li>• Its use in forensics</li> <li>• Costs, ethical considerations and consequences of interpretation errors</li> </ul> | <input type="checkbox"/> Simple process to extract DNA and examine the threads (using household detergents).<br><br><input type="checkbox"/> Make a model of DNA and draw stick diagram representing a portion of the structure of a DNA molecule (in a ladder-like form). |
