1. Introduction

An ever-increasing use of technology in society, both globally and locally, has allowed easier, faster and cheaper access to Information and Communication Technologies (ICT) like never before. This has resulted in digital 'citizens' of all ages having to acquire a new skills-set not taught using traditional methods and media. The pervasiveness of technology is often negatively publicised and the education system is responding positively by equipping all role players (teachers, learners and parents/guardians) with guidelines around the ability to recognise potential dangers and be discerning enough to avoid them.

The advantages of using ICT's for education far outweigh the disadvantages however; the latter need to be managed thoughtfully and responsibly in order to ensure the protection of our children. It is essential that schools are aware of how to manage the technology environment so that their learners have positive and safe experiences when using it and the learners, in turn, need to understand the implications of irresponsible use and need to be accountable for their behaviour. This can be done through proper Information Security (IS) education and awareness within schools.

It is essential that IS education is not confined to awareness of the risks and dangers of ICT's, but also includes an understanding of the benefits. The Safe School Committee¹ (comprising of all relevant stakeholders including school management), prescribed by South African Schools Act² should consider that while there are real dangers, too many limitations and controls can significantly decrease the positive aspects of access to technology. It is also essential that parents and guardians also need to share the responsibility as access to technology is not confined to the school walls, or solely to the time spent in the school environment.

The focus of the White Paper on e-Education³ published in 2004 recognises the role that ICT can play in education, and by extension in lifelong learning and the development process. The larger society benefits from electronic education (e-Education) include learning-for-life, the communication and exchange that are essential to democratic living, and globally competitive human resources.

As South Africa improves access through affordable hardware, software and connectivity, so must guidelines be in place for proper implementation and management thereof.

2. Purpose

The e-Safety Guidelines seek to identify the different ICT's currently used by school communities in particular, teachers and learners and to recommend strategies around managing ICT's in order for the appropriate and optimum use in, and for, education. This can be done by identifying all role players involved and their role and responsibility toward electronic safety (e-safety).

3. Background

Media and technology are evolving at a rapid pace, bringing opportunities, challenges and risks that are new to this generation. We are living in a world of rapid change, economically, politically, socially and technologically. The advent of improved connectivity and thus access to ICT's (for example the Internet and cell-phones) highlights the necessity for strategies to be in place in order that school communities have a positive, safe and fruitful experience of utilising technology.

Cell-phones in particular, are endemic in this country having a far-reaching footprint, even in the most rural of areas, so education needs to be a step ahead in ensuring that learners are equipped to manage both the risks and the benefits.

¹ Department of Basic Education Draft School Safety Policy 2010

² South African Schools Act No 84 of 1996

³ White Paper e-Education 1994

The Internet is a largely un-policed environment; anybody can upload information either authentic or not, unlike a traditional library whereby books go through an editorial process thus ensuring quality of information. We therefore recognise the need to teach our learners information literacy skills and these include digital literacy. Finding, selecting and using information effectively and appropriately are essential in the information age. Teaching our learners to use the most appropriate communication tools for productive and wholesome interactions, as well as the development of their critical thinking skills, is a responsibility of teachers and parents/ guardians.

Equally, social network platforms provide unprecedented opportunity for building contacts and staying in touch with current events, developing an online identity for socialising, but the environment needs to be managed so that it does not predominate in the life of a learner.

It is essential that the value of the various platforms, devices and mediums is embraced in schools but it is equally important that education around the use thereof is intensive and thorough. Information literacy, and thus digital literacy, is about knowing what is available technologically speaking and selecting the most appropriate tools to find and communicate information in the most efficient, effective, responsible, safe and appropriate way possible. These are the skills required of the 21st century learner and global citizen.

Finally ethical use of information and communication platforms is a key aspect of education. The principles inherent in the Constitution and cited in the Bill of Responsibilities for the Youth of South Africa⁴ are applicable in the online environment as anywhere else. Building the culture of responsibility, accountability and humanity in our schools also has application in the information age. Learners are, on the whole, proficient users of technology but are not necessarily worldly wise, it is for this reason guidelines are necessary.

4. Scope

The guidelines for e-safety in schools apply to all learners, teachers and school management, including School Governing Bodies (SGB's), within the context of schools in South Africa. These guidelines should also assist parent/guardians to ensure that their children are e-safe. Provincial Department of Education officials and District officials should also be familiar with the document, and support the implementation of it in schools.

5. Acronyms

AUP	Acceptable Use Policy
CD-ROM	Compact Disk - Read Only Memory
CSRT	Cyber Security Policy (CSRT).
DALRO	Dramatic, Artistic and Literary Rights Organisation
DBE	Department of Basic Education
DVD	Digital Video Disk

6. Glossary and Definitions

- Asynchronistic: occurs at different times e.g. e-mail conversations
- Blogs: Weblogs (blogs) are online journals created by individuals or groups and stored on the Internet. They are usually text based, but also include other media such as images, video and sound content. Blogs are an ideal space to write about personal ideas and opinions
- Browsers: tools to access the Internet
- Cloud computing: term used to describe delivering hosted services such as infrastructure, platform and software services to other devices on demand. It lessens the work the local machine
- Communities of Practice (CoPs): a group of people who have a common interest or profession and who communicate and share information.
- Cybercrime: computer crime or cybercrime is a form of crime where the Internet or computers are used as a medium to commit crime
- Cyberspace: the global network of interconnected computers and communication systems
- Cybersecurity: computer security includes protection of information and property from theft, corruption, or natural disaster, while allowing the information and property to remain accessible and productive to its intended users
- Cyberstalking: individuals who keep track of user's activities and information
- Creative Commons licences: these licenses allow creators to communicate which rights they reserve, and which rights they waive for the benefit of sharing
- Digital image: an image created by digital technology such as a digital camera, or imaging editing software
- Digital Literacy: the ability to find, discern, select and use online information appropriately.
- e-Education: consists of e-Learning, e-Teaching, e-Awareness and all the administrative responsibilities connected to these actions
- e-Learning: a broad term that generally refers to any kind of learning that is done with a computer and Internet connection or CD-ROM. It is widely used by individuals, educational institutions and businesses. e-Learning includes m-Learning.
- e-Mail: electronic mail, most commonly abbreviated email and e-mail, is a method of exchanging digital messages
- Filtering: a process to deny access to certain websites or resources as defined in the filter
- Firewall: part of a computer system or network that is designed to block unauthorised access while permitting authorised communications
- Flaming: hostile and insulting interaction between Internet users
- Internet: a worldwide network that connects smaller networks together
- Information literacy: the ability to recognise the need for information; to find, organise and evaluate such information for effective decision making or problem -solving, to generate new knowledge and to apply these skills for effective life-long learning
- Information skills: the skills which underpin a learner's ability to define the purpose of an information task, locate resources of data, select, interpret and use information to complete a task
- IT (Information Technology): defined as the "study, designs, expansion, execution, preservation or supervision of computer based information systems, specifically on computer hardware and software functions
- ICTs (Information and Communication Technologies): defined as forms of technologies that are used to create, store, share or transmit, exchange information; radio, television, video, DVD, telephone (both fixed line and mobile phones), satellite systems, computer and network hardware and software; as well as the equipment and services associated with these technologies, such as videoconferencing and electronic mail (UNESCO 2002)
- Inter-operability: the degree to which different types of software and hardware can interact effectively with each other

- Malware: a malicious or intentionally or unintentionally damaging software programme
- Media: message and images that we consume and create, as well as the technology used to consume and create these messages. These include television, movies, video games, books, magazines, the Internet, cell-phones and more
- m-Learning: a broad term that generally refers to any kind of learning that is done with a cell-phone, supplied directly on the cell-phone, as an application, game or similar content – or accessed via the Internet. It is widely used by individuals, educational institutions and businesses
- Multimedia: media that combine media of communication (text and graphics and sound etc.)
- Netiquette: Netiquette is a set of social conventions that facilitate interaction over networks, ranging from mailing lists to blogs and forums
- Phishing scams: is the criminally fraudulent process of attempting to acquire sensitive information such as usernames, passwords and credit card details by masquerading as a trustworthy entity in an electronic communication
- Plagiarism: "the wrongful appropriation, close imitation, or purloining and publication, of another author's language, thoughts, ideas, or expressions, and the representation of them as one's own original work", Wikipedia [Accessed August 2010]
- Social Media: user-created communication and content that may take the form of video, audio, text or multimedia that are published and shared in a social environment, such as a blog, wiki or video hosting site
- Social Networking: online platforms that provide means of personal communications between participants such as FaceBook, Linked In, Twitter, Buzz and many others
- Spam: is the abuse of electronic messaging systems (including most broadcast media, digital delivery systems) to send unsolicited bulk messages indiscriminately
- Spoofing: Spoofing, or decoying, is the practice of inundating online networks with bogus or incomplete files of the same name in an effort to frustrate traders and reduce unlawful downloading
- Synchronistic: things occur at the same time e.g. online chat
- URL (Uniform Resource Locator): address that identifies a specific website e.g. <http://www.education.gov.za>
- Viral branding: refers to marketing techniques that use pre-existing social networks to produce increases in brand awareness or to achieve other marketing objectives (such as product sales) through self-replicating viral processes
- White-list: An approved list; often used with regard to Internet content filtering, a whitelist only includes addresses (such as URLs or e-mail) that have been specifically vetted in advance

9. Advantages of ICT access in schools

In the South African context, the concept of e-Education revolves around the use of ICT to accelerate the achievement of national education goals. e-Education is further about connecting learners to other learners, teachers and related professional support services. e-Education connects learners and teachers to more information, ideas and one another via effective combinations of pedagogy and technology. The challenge is to transcend mere exchange of information and to transform it into a range of learning activities that meet educational objectives. e-Education is more than developing computer literacy and the skills necessary to operate various ICT's.

It is the ability to apply ICT skills to access, manage, integrate, evaluate, and create information in order to enhance teaching and learning and to function in a knowledge society. ICT capable learners are able to access information in the digital era, manage information effectively, interpret and integrate the results of research, evaluate the quality of these results, and create new information by adapting, applying, designing, inventing, or authoring information.

Success in the infusion of ICT into teaching and learning will ensure that every learner will be equipped for full participation in the knowledge society before they leave school. These learners will use ICTs to enhance interaction between citizens, governmental organisations and public and elected officials. These learners will invent new ways of using ICTs to realise the Department of Basic Education’s vision of developing a lifelong learner who is a critical and active citizen and who embodies the fundamental values of the constitution.

10. Issues of concern regarding ICT access in schools

The Byron Review⁵ has classified the risks of ICT use as relating to **content**, **contact** and **conduct**.

	Commercial	Aggressive	Sexual	Values
Content (child as recipient)	Adverts Spam Sponsorship Personal information	Violent/hateful content	Pornographic or unwelcome sexual content	Bias Racist Misleading info or advice
Contact (child as participant)	Tracking Harvesting Personal information	Being bullied, harassed or stalked	Meeting strangers Being groomed	Self-harm Unwelcome persuasions
Conduct (child as actor)	Illegal Downloading Hacking Gambling Financial scams Terrorism	Bullying or harassing another	Creating and uploading inappropriate material	Providing misleading info/advice

The risk is often determined by **behaviours** rather than the technologies themselves.

10.1. Online harassment and cyberbullying

Some aspects of digital communication can give rise to unfortunate behaviour. These include;

- The ability to communicate anonymously and so to escape responsibility for one’s actions.
- The ability to communicate remotely thus not having to deal with a “face to face” confrontation where the normal rules of politeness might inhibit unpleasant behaviour.
- The public nature of social media and social networks, which makes it easy to publically humiliate an individual with little or no consequence.
- An invasion of privacy if messages sent to/from an individual are released into the public domain

Cyberbullying can include the repeated sending of unwanted communication; “cyber stalking” as well as the posting of offensive statements about other learners or about teachers using any of the digital mediums that can make learners, and teachers, feel embarrassed, upset, depressed, or afraid. Groups and cliques can form online, and activities that start out as harmless fun, such as voicing an opposing opinion to another member, can quickly escalate into something much more serious. It should be made clear to all that bullying using digital means is still regarded as bullying and carries serious consequences according to the Acceptable Use Policy of the school.

It must be noted that bullying of any kind is a social problem and is thus a whole school responsibility. Normal courtesy and good manners apply as much in the cyberworld as the real world.

10.2. Inappropriate or illegal online behaviours

⁵ Byron Review, 2008: Available at <http://www.dcsf.gov.uk/byronreview>

Young people may get involved in other inappropriate, anti-social or illegal behaviour while using new technologies. The teaching of appropriate behaviours and critical thinking skills to enable learners to remain both safe and legal when using the Internet and related technologies is essential. Young learners who have been engaging in risky or illegal behaviours online may benefit from professional support or counselling to redress the balance of their online and offline life. Some children may become involved in much more serious activities. Possible risks include;

- Involvement in identity theft;
- Participation in hate or cult websites;
- Buying and selling of stolen goods;
- Divulging personal information online; and
- Publishing compromising information which may harm an individual's reputation

Learners should be aware of the consequences of leaving "online tracks" often called a CyberCV i.e. information about themselves that may damage their reputations and employment opportunities.

It is also essential for learners to take charge of protecting their own privacy, and avoid posting any information which can be used by identity thieves. Identity theft is a very real risk that has significant personal and financial cost. Learners should be made aware of safety and privacy measures that exist on social networking sites; these can include a "Report Abuse" button, safety tips, age restrictions, built in privacy controls etc.

10.3. Physical danger and sexual abuse

A criminal minority make use of the Internet and related services such as "chat-rooms" to make contact with young people. The intention of these people is to establish and develop relationships with young people with the sole purpose of persuading them into sexual activity and exploitation. Cyberstalking is where individuals keep track of the activities of certain people through their participation on social networking sites. This can result in physical stalking if their whereabouts are revealed online. Paedophiles will often target specific individuals, posing as a young person with similar interests and hobbies in order to establish an online friendship. These relationships may develop over days or weeks, or even months or years, as the paedophile gains the trust and confidence of the young person, perhaps progressing to other forms of contact such as text messaging as a prelude to a meeting in person or even persuading a young person to forward explicit photographic images of him/herself or another young person, or even just to participate in communication of a sexual nature. These techniques are examples of criminal conduct and adult persons who commit such acts can be convicted of the "sexual grooming" of children.

A young person needs to understand that it is unwise to supply personal information, pictures of an explicit nature or arrange to meet people they have met online, thereby posing a risk to their safety or that of their family or friends. Furthermore the online world offers a degree of anonymity and the online persona of a person, under these circumstances, is far removed from reality, hence learners need to understand this.

10.4. Exposure to unsuitable materials

Exposure to inappropriate materials poses a risk when using the Internet. This may include, but is not limited to, material that is pornographic, hateful or violent in nature, activities that are dangerous or illegal, or material that is just age-inappropriate or biased. One of the key benefits of the Internet is that it is open to all, but unfortunately this also means that those with extreme views are able to share their ideas without restriction or consideration of other views. In the case of pornography the Internet plays host to a large amount of material. Curiosity about sexuality issues is a normal part of sexual development, but young people may be shocked by some of the overtly explicit material online. The ease of access to adult sites such online gambling, making and sale of weapons, and sites providing recipes for drug or bomb making are also of great concern.

Through devices such as mobile phones young people may themselves become perpetrators in the creation of inappropriate content by the making and distribution of indecent images and derogatory lists. They also

might not actually create the content but may view and thus be exposed to unsuitable material or be the victim of such abuse of technology.

10.5. Plagiarism and copyright infringement

Copyright law applies on the Internet, but is ignored by many young people who download and swap music files, “cut and paste” homework assignments from other’s work, purchase whole assignments from online “cheat sites” and are doing so without realising the implications and consequences. The school needs to ensure that assignments are given in such a way as to not invite a “cut and paste” response but have activities within that require primary research, problem-solving and other higher-order thinking skills as opposed to merely superficially ‘grazing’ for information. Learners must be taught that credit must always be given to the source of information and pirating music, images, videos or software is not only unethical but is dishonest and illegal. Available referencing and citation programmes can help instil correct research methodology as must teachers critically evaluate what is expected from the learner.

Social networking platforms have created an environment whereby information is shared without necessarily giving credit to the source. The democratisation of information i.e. everybody has an equal voice, is one of the most valued aspects of recent technologies. It has however, blurred the edges of respect for intellectual capital and anybody who ventures into the environment needs to understand that their opinions might not necessarily be given credit to them.

10.6. Obsessive use of the Internet ⁶

Habitual use or addictive behaviour in the online world creates the potential for learners to become obsessed with the Internet or cell-phone chat services and related technologies. Factors such as spending a significant amount of time online, deterioration of the quality of schoolwork, diminished sleep time, or negative impacts upon family relationships, may all be indicative that the online world is taking too high a priority in a young person’s life and can intrude excessively if not managed properly.

Another aspect of misuse of the technology is the circulating of band-width intensive e-mail (large file attachments) which are unrelated to the school working environment, chain letters etc. Beyond compromising the speed of connectivity, the time taken on managing inappropriate and personal activities during school working hours can be costly to the performance of both the learner and teacher.

11. Responsibilities

Although these guidelines have been written specifically with schools in mind it is also essential that Provincial and District officials take cognisance of the content and apply it in their own situation where relevant. Ethical and accountable use of technology applies at district level as well as in the schools. They should also support the school in implementation of the guidelines.

11.1. The Responsibility of the School

Technology, as per its broadest meaning, has an imperative role in today’s classrooms. The use of that technology, however, must be carefully and strategically implemented in order to be of highest value to both teachers and learners. Technology use has a place in formal and informal learning; it does not only happen in the classroom but outside of the school environs. Traditional controls no longer exist and schools need to embrace the potential of technology for learning through using appropriate measures.

Recognising that the use of technology will increase exponentially in all our lives, the responsibility of the school is to not only incorporate technology as a valuable learning tool, but to also equip the learners to be discerning, responsible and ethical participants in the information age.

⁶ Safer Children in a Digital World: the report of the Byron Review - Children and New Technology 2008

Through the Safe School Committee schools must develop their own Acceptable Use Policy (AUP), as it must be recognised that children will bring an increasingly sophisticated range of handheld devices into school giving them separate access to content that is not necessarily appropriate. The AUP should be linked to, and the penalties defined by, the existing Code of Conduct⁷ that must be adopted by every public school.

The AUP should clearly define the penalties imposed for violation of the agreement and this should be read and signed by every learner and responsible parent or guardian. The school must keep the copies signed by the learner and the parent/guardian and all signatories should have access to a copy via the school Intranet or otherwise. A simplified version of the AUP should be posted in the staffroom and also on the screen of all the computers. In order to create a sense of personal responsibility it is important that wording is values-based as opposed to rules-based.

As misuse of technology is not necessarily confined to learners, schools can elect to have a similar policy for teachers. The AUP policy of a school will have to be revisited once the Protection of Personal Information Bill, 2009, is enacted. The Bill aims to regulate the processing of personal information by public and private institutions and will, among others, regulate unsolicited electronic communications such as “spam”. An Information Regulator will be appointed to oversee the implementation of the legislation. AUP policies may, therefore, in future, have to be adapted with the assistance of the DBE and Information Protection Regulator to ensure that they are brought in line with the legislation concerned, where necessary.

11.2. The Responsibility of the Teacher

Teachers have a specific responsibility in terms of the use of ICT in schools. Partnership for 21st Century Skills⁸ specifically refers to information literacy as well as ICT literacy. Learners are increasingly using their cell-phones to communicate, share and find information and teachers need to understand the concept of the 21st century learner, especially to ensure that their teaching strategy is in line with the devices their learners use. Teaching and learning can be greatly enhanced with increased access to communication and information and this potential needs to be maximised by teachers. Integrating technology appropriately into teaching practice is important; a ‘just-in-time’ approach within a contextualised learning environment versus “just-in-case” i.e. learning computer skills in case they may be needed in the future. An additional responsibility of the teacher is to make sure that they themselves are digitally literate and can educate around the technology with confidence.

Teachers can direct learners to age appropriate content and web browsers; they can also create White Lists of carefully selected websites appropriate to the topic and the age group. Telling learners to “Google” a topic i.e. use a single search engine to find information, is the equivalent of exposing them to a massive library with no information retrieval skills, furthermore the most benign topic can elicit inappropriate material.

It is further suggested that teachers may need to provide guidance, counselling and advice to learners who may be dealing with harassment, stalking, cyberbullying etc.

A further aspect of the responsibility of the teacher is to not abuse access to technology for personal matters, doing time consuming non-work related activities, circulating bandwidth intensive files and images which do not benefit the learners or the school, using school printers for personal use etc. Leading by example in the ethical use of technology goes a long way in educating learners.

11.3. The Responsibility of the Learner

Learners today are navigating social networking websites, downloading music, uploading photos and videos, e-mailing, blogging, building personal websites, and playing video games with people from around the world. Online and user-generated media, whether it is television, cell-phone, video games or videos are especially challenging because there are few barriers to what can be posted and made available, and that can make for offensive content.

⁷ South African Schools Act (Act No 84 of 1996 amended 2007)

⁸ Partnership for 21st Century Skills <http://www.p21.org/>

Learners are however, at different levels of sophistication and this can negate a positive global experience. The nature of technology, especially interactions predominantly in a second language for the majority of our learners, can give rise to misinterpretation and misunderstandings.

Learning to take responsibility for one's behaviour is an important element in the education path and this includes the use of technology. The ease of access can invite an inappropriate, spontaneous reaction and it is important that learners understand the need to select the most suitable communication tool to resolve issues and not create them. An aspect of taking responsibility in the environment is to report any inappropriate behaviour especially if offensive acts are negatively affecting a fellow learner.

11.4. The Responsibility of the Parent/Guardian

Parent and guardians have a responsibility to monitor the use of technology both in the home and outside of it. This is difficult to do, especially with cell-phones, but if children and young adults are educated around the use of technology and the education is values-based versus rules-based then this can go a long way to ensuring the healthy and balanced use of the devices.

It is possible to set up age appropriate content filters on Internet browsers and it is also possible to check the cache (browsing history) on a computer if it is felt necessary to do so. The technology enables parents/guardians to password protect either a computer or online facilities like "chat rooms" even through cell-phone access. This prohibits children of a sensitive age from accessing these areas.

There is filtering/monitoring software that can be downloaded but children and young adults need to be informed that their activity is being checked upon. It is important that the school is supported by the parent/guardian in respect of any sanctions imposed if the school AUP has been breached.

Parents/guardians are encouraged to disallow children from using or accessing the Internet in isolation or behind closed doors. A suitable family area should be set up for such usage and this includes access to television. Furthermore parents/guardians should discourage their children from publicly divulging personal information such as contact details and whereabouts.

12. Strategies for managing ICT access in schools

It is very important that a school sets up a team within the Safe School Committee to manage e-Safety and this team should consist of at least;

- School Management
- Network administrator
- IT teacher
- Teacher-Librarian/Counsellor/Life Skills teacher
- School Governing Body representative
- A member of the local police service
- Learner representative
- Other appropriate specialists

The function of the team is to develop, implement and enforce an Acceptable Use Policy/ies (AUP) for the school with attendant penalties for breach of such a policy.

12.1. Acceptable Use Policies (AUP's)

It is strongly advised that each school, as part of the function of the Safe School Committee, develops an Acceptable Use Policy and all learners should be required to sign it, indicating that they accept the policy and related sanctions. Alternatively, two separate policies can be developed, learner specific and teacher specific. It is further advised that the Acceptable Use Policy/s should include a clear statement of the actions, which the school will take if the policy is breached. This will considerably strengthen the school's position should this situation arise.

The policy/s should be endorsed by a credible legal service to ensure that it is implementable in terms of the legislation and also that Child Protection procedures are followed. South African Police Services (SAPS) has guidelines in this regard.

All role players must be made aware of the content and consequences of the policy. Parents/guardians should take all reasonable steps to ensure that their children comply with the requirements.

There are basically three levels of issues surrounding the use of technology. First, there are the problems associated with nuisance in classes and disruption of learning and teaching. Second, there is the type of incident, which has potentially criminal implications. Third, there are incidents with specifically child protection dimensions. An Acceptable Use Policy must therefore address all three levels.

The suggestion is offered that the policy might explicitly cover the following:

- The school's responsibility and rights towards ICT use;
- The learner's responsibilities and rights towards ICT use;
- The parent/guardians responsibility and rights towards ICT use; and
- The consequences if the policy is not adhered to.

It is stressed that in cases, which are disciplinary in level, school disciplinary procedures (including exclusions when required) should be used proportionally and appropriately. In other cases, it is best for schools to work constructively with parents/guardians. In connection with these issues, the normal rules and protocols apply with regard to the rights of schools to take action over behaviour, which is school-related but which actually occurs out of school.

12.2. School Software Security

There are several ways that a school can manage online security and it is important that a strategy is in place. The two main elements are to ensure that school computers are protected from viruses and malware and also that online behaviour on the part of learners and teachers is managed.

12.2.1. Antivirus Software

Antivirus software should be installed on the school server/individual computers and not only the software definitions updated online on a regular basis but the computers regularly scanned. Furthermore peripherals such as memory sticks/flash drives, external hard drives etc should also be scanned as this is a common way for viruses to be introduced into a system.

Proprietary antivirus software normally entails the payment on an annual licence fee and this range from a single-user licence to multiple-user licence.

There are free antivirus software programmes available on the Internet. Furthermore there are online detection programmes which scan computers whilst linked on the Internet.

It is vital that antivirus software is current and regularly updated, checked and computers are scanned. There is no use in having antivirus software if it is not properly managed.

12.2.2. Monitoring software

This can be installed on computers so that online activity can be monitored. There are many commercial programmes available as well as Open Source classroom management programmes.

A programme should be selected on the basis of controlling online behaviour through documenting and recording for the purpose of pastoral intervention versus punishment and/or banning. Users (learners and teachers) must be informed at the outset that their online activity is being monitored. The purpose is to provide a safe online environment which educates users how to manage their access.

In addition to informing users (learners and teachers) of the fact that monitoring is taking place, they should also be informed, within the AUP, of the following:

- Exactly what data is captured by the monitoring software.
- How long is this data kept
- Who has access to this data
- How the data will be kept safe so that unauthorised users cannot access it
- What mechanisms there are to ensure the data is accurate
- How this data can be used.

The issues discussed above must be set out and explained in the AUP.

12.2.3. Document Security

In keeping with the points in 12.2.2, included in the AUP should be a reference to document security and the confidentiality of school documentation. It is known that businesses have been compromised through the deletion or inappropriate copying or forwarding of information and this has to be a consideration for schools. A system for password access for different user groups needs to be created and certain documents need to be secured, either password protected or using software such as Adobe Acrobat. Information security requires that information on learners stored on the school network is secure.

Computer hacking by mischievous learners is another element of school ICT security and it is for this reason that the identity of all users is kept. It must be impressed on learners that their password is confidential and that they must log off before leaving a computer.

It is also advisable that an on-site and off-site backup of all the school data is kept and is regularly updated. Hardware failure happens as does theft and fire. The backup also needs to be tested on a regular basis.

13. Conclusion

Through the development and implementation of these guidelines it is hoped that schools are equipped to manage ICT in a positive and productive way. ICT's are part of the lives of the 21st century learner and will increasingly impinge on society. There is no choice but to embrace the attributes of technology and use them to enhance the education, communication and knowledge acquiring process. Education wants to develop global citizens who are confident users who collaborate and participate but who know the boundaries and respect decent behaviour.

16. ANNEXURES

- 16.1. Examples of Acceptable Use Policies
- 16.2. Information sheets

ANNEXURE A: The Acceptable Use Policy (AUP) for ICT in a School

1. Developing an Acceptable Use Policy (AUP) for ICT in a school

The Acceptable Use Policy (AUP) for Internet use is one of the most important documents a school will produce. Creating a workable AUP requires thoughtful research and planning.

With the current push for computer technology in the classroom, many educators and parents fear dangers that the uncensored access to technology might hold for children: inappropriate or obscene words and images; violence; and people who pose an online threat.

One strategy that many schools use to defuse such dangers is an Acceptable Use Policy, or AUP, for the school.

WHAT IS AN AUP?

The Department of Basic Education suggests that an effective AUP contains the following six key elements:

- a preamble,
- a definition section,
- a policy statement,
- an acceptable uses section,
- an unacceptable uses section, and
- a violations/sanctions section.

The **preamble** explains why the policy is needed, its goals, and the process of developing the policy. This section should say that the school's overall code of conduct also applies to learner online activity.

The **definition section** defines key words used in the policy. Words and terms such as Internet, computer network, education purpose, and other possibly ambiguous terms need to be defined and explained to ensure learner and parent comprehension.

A **policy statement** must tell what computer services are covered by the AUP and the circumstances under which learners can use computer services. Schools may, for example, base learner access to computer services on the completion of a "computer responsibility" class that will enhance learner understanding of the AUP guidelines.

The **acceptable uses section** must define appropriate learner use of the computer network. It may, for example, limit learner use of the network to "educational purposes," which then must be defined.

In the **unacceptable uses section**, the AUP should give clear, specific examples of what constitutes unacceptable learner use. In determining what is unacceptable, the committee charged with drafting the AUP must consider:

- what kind of computer network sites, if any, should be off limits to learners;
- what kind of learner sending, forwarding, or posting of information, if any, should be prohibited,
- what kind of learner behaviour will be destructive to the computer network services and should, therefore, be restricted.
- ensure that learners understand and apply the feelings, rights, values and intellectual property of others in their use of technology in school and at home;
- understand what action should be undertaken if they feel threatened, worried, uncomfortable, vulnerable or at risk whilst using technology

Among the sites that might be off limits to learners are chat rooms and examination paper vendors. In addition, AUPs often prohibit learners from sending, forwarding, or posting sexually explicit messages, profanity, and harassing or violent messages.

The **violations/sanctions section** should tell learners how to report violations of the policy or whom to question about its application. The AUP should provide that violations will be handled in accordance with the school's general learner code of conduct.

A typical AUP has a section where learners and parents sign the document, in acknowledgement that they are aware of learner's restrictions to network access and releasing the school of the responsibility for learners who choose to break those restrictions.

In a free and democratic society, access to information is a fundamental right of citizenship, and therefore independent learner use of telecommunications and electronic information resources will be permitted upon submission of permission forms and agreement forms by parents of minor learners (under 18 years of age) and by learners themselves. The message should thus be that learners have intellectual freedom based on their taking responsibility for accepting limits to that freedom.

SAFETY FIRST

AUPs should make learners aware of basic information and communication technology safety rules before they are allowed access independently. The rules should be considered to guide independent use by learners, such as:

- I will tell my parents right away if I come across any information that makes me feel uncomfortable.
- I will never agree to get together with someone I 'meet' online without first checking with my parent/guardian. If my parent/guardian agrees to the meeting, I will make sure it is in a public place and I will bring my parent/guardian.
- I will never send a person my picture or anything else without first checking with my parents.

It must be remembered that an AUP cannot be developed in a vacuum. A vital, workable Acceptable Use Policy must be based on a philosophy that balances freedom and responsibility. It should be a values-based document as well as that aimed at protecting the individual.

Schools must be prepared to:

- develop an 'acceptable use policy,' (AUP);
- provide examples of AUPs from schools and libraries;
- respond to inaccurate perceptions of inappropriate material;
- promote positive examples of use;
- understand software to block inappropriate sites and related safety/censorship issues;
- contact organisations committed to electronic freedom of information; and
- ensure there are appropriate pre-screened resources available to learners.

Example 1: A PRIMARY SCHOOL INTERNET ACCEPTABLE USE POLICY

Name of School :

Section A: Expectations

Whilst the Information Technology (IT) department has many stringent checks and controls in place, the Internet is a vast and continuously growing arena and as such there are some sites and images that may escape the schools scrutiny and it is in this area that the children need to be responsible and educated in their responses.

Pupils are responsible for their own behaviour on the Internet just as they are in a classroom, on the sports field or on the playground. Communications and interaction on the internet are often public in nature and general school rules for behaviour and communications will apply. This includes their interaction with other pupils on social networking sites such as Facebook, MXit, Twitter etc. even if accessed from home, as they are still learners of name of school and are expected to uphold the ethos of the school.

The use of the Internet is a privilege, not a right, and may be revoked if abused.

Pupils are personally responsible for their actions when accessing and using the school computer resources.

Pupils are advised never to access, keep or send anything that they would not want their parents / teachers or anyone else to see. It is expected that the pupils will follow and comply with rules set out below.

Acceptable uses

As internet facilities are a limited resource and one for which the school pays, users are expected to use them primarily for:

1. Direct educational purposes
2. Accessing information for private interests or hobbies which are school related
3. Constructive communication with other Internet users and email recipients

Section B: Unacceptable uses

Users are not to:

1. Take part in the sending or resending of chain letters.
2. Use bad, offensive or derogatory language, or participate in any activities which discredit another child, in any communications over the internet.
3. Attempt to access or send attachments of any pornographic or socially unacceptable content. This includes racist, violent, harmful and bullying content.
4. Use any other user's Email account or logon.
5. Attempt to spread viruses or download programmes or games or malware of any kind.

In addition, when using the school's network, internet and email facilities, pupils must understand their responsibility and behave in the following manner:

1. All users are entitled to the privacy of their work and therefore it is an offence to use or attempt to use another user's account or password.
2. Should a site, email message or image manage to bypass the safety controls it is the pupil's responsibility to close the item and report it immediately to a staff member, to enable the blocking of the material.
3. Storage capacity is at a premium and pupils are encouraged to conserve space by deleting unnecessary emails or saved pictures and documents that take up space on the server.
4. Pupils must in no way attempt to "hack into" or interfere with the normal running of any other computers or networks.
5. Pupils have full responsibility for their user accounts and must not share their passwords with anyone other than their parents. If they do and their account is used for breaking any of the acceptable use policy and it is traced to their username they will be solely responsible as the owners of the account.
6. Pupils must be aware that excessive usage and their internet activities are logged and can be traced.
7. Printing is costly and pupils must be aware that they have the privilege of a printing account and should they exceed this by printing private matter they will have to purchase a "recharge" voucher.
8. The computer staff, general staff, management and the Principal reserve the right to investigate any child's email or Internet usage who, in their opinion may be transgressing any of the rules in this policy.

We have read this document, discussed and understood its contents and agree to abide by them:

Pupil's name: _____

Date: _____

Pupil's signature: _____

Date: _____

Parent's/ guardian's name: _____

Date: _____

Parent's/ guardian's signature: _____

Date: _____

Example 2: MODEL OF AN ACCEPTABLE USE POLICY FOR ICT IN A SCHOOL

The school's information technology resources, including email and Internet access, are provided for educational purposes. Adherence to the following policy is necessary for continued access to the school's technological resources:

Learners must:

- Respect and protect the privacy of others.
- Use only assigned accounts.
- Not view, use, or copy passwords, data, or networks to which they are not authorized.
- Not distribute private information about others or themselves.
- Respect and protect the integrity, availability, and security of all electronic resources.
- Observe all network security practices, as posted.
- Report security risks or violations to a teacher or network administrator.
- Not destroy or damage data, networks, or other resources that do not belong to them, without clear permission of the owner.
- Conserve, protect, and share these resources with other learners and Internet users.
- Respect and protect the intellectual property of others.
- Not infringe copyright (not making illegal copies of music, games, or movies!).
- Not plagiarise.
- Respect and practice the principles of community.
- Communicate only in ways that are kind and respectful.
- Report threatening or discomfoting materials to a teacher.
- Not intentionally access, transmit, copy, or create material that violates the school's code of conduct (such as messages that are pornographic, threatening, rude, discriminatory, or meant to harass).
- Not intentionally access, transmit, copy, or create material that is illegal (such as obscenity, stolen materials, or illegal copies of copyrighted works).
- Not use the resources to further other acts that are criminal or violate the school's code of conduct.
- Not send spam, chain letters, or other mass unsolicited mailings.
- Not buy, sell, advertise, or otherwise conduct business, unless approved as a school project.

Learners may, if in accord with the policy above

- Design and post web pages and other material from school resources.
- Use direct communications such as IRC, online chat, or instant messaging with a teacher's permission.
- Install or download software, if also in conformity with laws and licenses, and under the supervision of a teacher.
- Use the resources for any educational purpose.

Consequences for Violation

Violations of these rules may result in disciplinary action, including the loss of a learner's privileges to use the school's information technology resources.

Supervision and Monitoring

School and network administrators and their authorized employees monitor the use of information technology resources to help ensure that uses are secure and in conformity with this policy. Administrators reserve the right to examine, use, and disclose any data found on the school's information networks in order to further the health, safety, discipline, or security of any learner or other person, or to protect property. They may also use this information in disciplinary actions, and will furnish evidence of crime to law enforcement.

I ACKNOWLEDGE AND UNDERSTAND MY OBLIGATIONS:

Learner

Date

Parent/Guardian

Date

Parents please discuss these rules with your child to ensure he or she understands them.

These rules also provide a good framework for your child's use of computers at home, at libraries, or anywhere.

ANNEXURE B

The following are guidelines on different media platforms, tools and content including Copyright issues.

Television Programmes

Description: Television (TV) is a **medium** for transmitting and receiving moving **images**, usually in colour and accompanied by **sound**.

Uses: Television programmes can be used for education as well as entertainment. Documentaries, films and reality programmes can be used as a resource in the classroom as well as specially designed programmes aired to support the curriculum. At present there are existing education channels specifically to support education in South Africa.

Advantages: Television programmes can have a far reaching impact on learning. Well made, informative programmes can be an invaluable tool in ensuring an enriching and relevant learning environment. Locally developed programmes can be in the vernacular and contextualised for the local cultural and geographical environment.

Considerations:

- Access to television, especially subscription television is not always available to all learners and teachers.
- Advertisements can be intrusive and disruptive. They can also be inappropriate to the age of the learner.
- Licences for multiple viewers can be expensive.
- Programmes made in other countries do not always support local culture, language and traditions.
- Making television programmes is a time intensive and expensive venture which means that the majority of programmes are imported.
- Not all programmes on television have been classified according to the appropriate age group etc.

Recommendations:

- Although access to television access is mostly in the home, schools can invest in making television available.
- Television is a passive medium with no interaction and should be used appropriately and selectively.
- Programmes can be valuable especially those aired specifically for learners. Recordings can be made of these and broadcast at school however; copyright rules should be adhered to.
- Programmes shown to learners should be properly classified by the Film and Publication Board.
- The school must comply with the Film and Publication Board classification as learners should not be exposed to inappropriate material.
- Schools must comply with the licence conditions of the SABC with the number of licences matching the number of television sets.
- The school's Acceptable Use Policy (AUP) should take cognisance of the regulations and have steps in place to ensure compliance.

Digital imagery e.g. film, video/DVD and photographs

Description: The term "digital image" both moving and still, refers to an image created with digital technology such as digital camera, digital video camera, scanners or image editing software.

Uses: Every aspect of education can be enhanced through the use of digital images – either still images such as photographs or moving images such as video or animations.

Advantages:

- Images in education convey a powerful message especially and are especially useful for second language learners.
- Images are further enhanced when combined with sound and movement.
- Many cell phones can be used to create digital still images and video, which makes it easy to create and share.

Considerations:

- Sharing images may be a cause for concern when these images are of a violent or personal nature or in any other way inappropriate.
- The taking and sharing of such images could be an invasion of privacy of an individual as well as potentially harmful to the viewer, especially if not used within the context of learning.
- Schools can hire/buy/record/copy videos/DVD's and inadvertently be in breach of copyright, especially if the group is large and the material used is only for purposes of entertainment.
- Images can be downloaded from the Internet and this could also breach copyright.
- Video streaming and downloading of large images can be a large drain on network resources.

Recommendations:

- Programmes shown to learners should be properly classified through the Film and Publication Board and these should be complied with.
- There are limitations on the size of the group of viewers, the purpose of the viewing and also whether learners can be charged. The school needs to be familiar with these rules.
- If photographs or video clips are uploaded to the Internet, learners and teachers need to be aware of the need to protect the identity of the people portrayed, as well as the identity of the authors of the material. If any of these are minors, it may be appropriate to take measures such as using only first names, or removing any information which could be used to track these individuals.
- Cognisance should be taken that some cultures do not permit images to be taken of people.
- Any image, whether still or video, may only be re-used with permission from the original copyright holder, or according to the terms of the Creative Commons licence if there is one.
- Teachers and learners should take cognisance of what images may be downloaded without breaching copyright.
- Credit should be given to the source of any digital material used for education purposes. Learners and teachers equally, should respect copyright.
- Schools should be aware that many brands are capitalising on the medium to promote their products and learners should be made aware of this.
- Permission from the parent/guardian can be included in the school's Acceptable Use Policy (AUP) if images of learners are to be used on the Internet.
- The school's Acceptable Use Policy (AUP) must specify where, when and what type of digital imagery can be used in a school.
- The school's Acceptable Use Policy (AUP) should take cognisance of the regulations regarding group broadcasts (e.g. video hire) and have steps in place to ensure compliance.

Books, newspapers and magazines

Description: Print (paper-based) material can take a number of forms but the most commonly used in a school are books, newspapers and magazines.

Uses:

- Print materials should be made available in schools because the curriculum is resource-based. Access to print material is essential if we are to create a literate society.
- Information literate learners can only be developed if they have access to a range of resources, both digital and non-digital (paper based).

- One of the aims of education is to create discerning knowledge users who are ethical life-long users of information able to use a variety of resources.

Advantages:

- The advantage of print material is that it does not depend on electricity to be accessible nor expensive computer hardware which has to be maintained.
- Books go through an editorial and selection process so the information is, on the whole, trustworthy.
- Magazines can be used in a variety of teaching situations and the availability of paper-based material will encourage the reading habit as well as the fundamentals of information retrieval.
- Newspapers ensure currency of information and can also be used in a variety of ways for teaching e.g. debate topics.
- A range of resources encourages higher order thinking skills embedded in the research cycle e.g. comparison and evaluation.

Considerations:

- Print material needs to be managed, circulated and maintained.
- Theft, including vandalism is a key challenge to the provision of print material as well as the limitations of the size of the stock itself.
- If there is no budget or single person responsible for the collection, then this resource can be easily depleted or damaged.
- Books, newspapers and magazines date and thus require a budget to keep the collection current.

Recommendations:

- There should be a budget for paper-based material and the school should nominate an individual, in the absence of a school library/librarian to monitor and promote the use of the collection.
- Each school should ensure that key reference material that is current and relevant is available e.g. encyclopaedias, atlases and dictionaries.
- Credit should be given to the source of any information used for education purposes. Learners and teachers equally should respect copyright.
- Modifying work without permission can affect the reputation of the author. Permission should be sought.
- Photocopying of printed material should be limited to what is allowed in terms of the Copyright law.
- The school's Acceptable Use Policy (AUP) should take cognisance of the regulations regarding copyright and have steps in place to ensure compliance.
- Photocopying of printed material should be limited to what is allowed, and copyright respected

Online Computers and Mobile devices

Description: An online computer in this context is a fixed machine that receives and outputs data in a meaningful way and is connected to the Internet. It can be a standalone device or linked to other computers through a server but is designed to stay in one place. Mobile devices include any type of technology that is designed to be taken and used on the move. The term 'mobile technologies' often refers to cell phones and smartphones (i.e. cell phones with in-built computer functions). It also applies to laptops and notebooks, handheld computers such as PDAs and EDAs (personal and educational digital assistants), media players and e-book readers.

The following is specific to mobile devices:

Uses:

Supporting learning in and outside the classroom through enhancing communications and access to information. There is an immediacy to the use of mobile devices i.e. 'anytime, anywhere learning' versus fixed technologies which are, at times, inaccessible.

Advantages:

- Parents/guardians can contact the learners during school hours and vice versa.
- The school can sms the parents/guardians school information e.g. change of sport practice.
- Sharing information with others, such as showing class projects to parents or sending missed assignments to classmates that are absent.
- Use of cell phones can contribute to securing a learner's own safety.
- There are many ways mobile devices, such as cell phones, can support learning across various aspects of the curriculum. For example: in Visual Arts, learners can compare the quality and resolution of images taken on different devices in Life Orientation, learners can video and upload personal messages of support for safety campaigns, in Geography, they can investigate how topography affects mobile phone reception and plot data to GPS information systems.
- Giving learners flexible access to information, resources and tools; curriculum support e.g. social networking platforms, making learning a personal experience
- Recording and sharing experiences; and carrying out joint activities with learners from different schools or countries.
- Many cell phones are equipped with calculators - plenty of new math curricula encourage the use of a calculator when problem-solving. A learner should become accustomed to having a calculator handy for both homework and real life maths applications.
- Many cell phones are equipped with calendars – learners can be encouraged to load school events or project deadlines to their cell phone calendars.
- Many cell phones are equipped with a camera. These can be used for content creation, documentation and communication.
- If a learner is slow to copy notes from the board, pictures can be taken of the missed notes and accessed later. This also applies to sending notes to absent classmates.
- Sound recordings can be made of educational material.
- Interviews can be recorded with sound or video inserted into presentations and movies.
- As learners are using social networking platforms, teachers should be encouraged to add the contact names of his/her class to communication with the class collectively or individually on school related issues.

Considerations:

- Mobile devices have to be managed in an educationally sound manner as, by the very nature of their mobility, they can be very intrusive.
- Learners who carry mobile devices can be a target for thieves. Safety of learners on their way to and from school is a major consideration.
- Mobile devices can be used to cheat in exams by sending test questions to friends.
- The ability of mobile devices to make recordings, whether sound, picture or video, can be abused. For example:
 - Recording individuals without their knowledge. Consent to being filmed or photographed should be specified in the school's Acceptable Use Policy (AUP).
 - Recording illegal or inappropriate behaviour such as the abuse of people or animals, bullying or taunting messages.
 - Recording and sharing sexual behaviour – a practice called "sexting".
- Learners should never use mobile devices for illegal offences such as committing a crime, arranging a drug deal etc. and the penalties for such should be clearly specified in the school's Acceptable Use Policy (AUP).
- Mobile devices can blur the distinction between what happens at school, and outside of school. This can result in misunderstandings and confusion. For example – if a learner uses mobile devices to commit a crime at school this is taken by the Safe School Committee and, if outside school, it is a matter for the parents/guardian and SAPS.

Recommendations:

- Outright banning of the use of mobile devices in a school can be self-defeating and educationally unsound. Furthermore the mobile device environment is becoming more and more endemic and schools have a responsibility to manage it and educate around it.
- An Acceptable Use Policy (AUP) in a school should specify when and for what purpose the use of mobile devices is acceptable in a school and have steps in place to ensure compliance. This includes sending and receiving calls to/from parents/guardians.

The following is specific to computers and mobile devices

○ **e-Mail:**

Description: e-Mail, or electronic mail, is a method of exchanging digital messages across the Internet or other computer networks. This can be on a one-to-one basis or within a group, either open or closed.

Uses: e-Mail provides a quick and effective means of communication locally and internationally. It also allows for the attachment of documents and images which otherwise would have to be posted (snail mail) or faxed.

Advantages:

- e-Mail provides for a quick and simple response.
- It provides a useful record of communications leaving a 'mail trail' of evidence especially if "sent" items are never deleted.
- e-Mail gives time for a studied response to a discussion as opposed to the immediacy of a telephonic conversation or online synchronistic (when things occur at the same time) communication e.g. chat room. Asynchronistic (when things occur at unrelated times) communications allows for a period of time between responses.
- Unless e-mail is web-based, one need not be online to communicate; messages can be answered offline and only sent when connected.
- e-Mail is a useful way of sending attachments of text, images, sound or video.
- e-Mail can be sent to individuals or many, alternatively group mailing lists of recipients.

Considerations:

- e-Mail is subject to interception (violation of confidentiality, blocked delivery or replay), unauthorised modification of content or denial of message received. In other words, e-mail is exposed while in transit on the Internet.
- e-Mail fatigue is when there is an information overload and a user ignores a large number of e-mail messages after falling behind and failing to answer them.
- Sorting, sifting, filing and replying to e-mail can be time consuming with little benefit, especially if a user belongs to a number of mailing lists.
- Spam (group advertisements), flaming (insults) 'fun' mails (not work related), bogus virus warnings and untrimmed e-mails can all create problems for bandwidth, work concentration and time on task.
- Phishing and spoofing are bogus e-mails and websites which encourage people to divulge sensitive information like PIN numbers. Victims can fall prey to this and be defrauded.
- Attachments can spread viruses and can also use up bandwidth unnecessarily.
- e-Mails can accidentally be sent to the wrong person or group or forwarded to a person who is not the intended recipient. They can also be copied either visibly or 'blindly' to an unintended recipient.
- To secure e-mail, one needs to ensure confidentiality of the message, message integrity (what the receiver sees is exactly what was sent), non-repudiation (the sender cannot deny that the message was sent) and authenticity of the sender (the sender is who the sender claims to be).

Recommendations:

- Users must be made aware that they will be held responsible for the content of any e-mail message they transmit.
- e-Mail should not contain messages using language or content that is inappropriate or unacceptable.
- Users should be made aware of basic rules of Netiquette e.g. the use of capitalised words is considered shouting.
- The immediacy of the medium must be managed; users should avoid a hasty reaction to an e-mail if emotionally charged.
- Users should be taught the importance of not divulging passwords and also logging off after use.
- Teachers and learners should understand what is spam including hoaxes, and not forward such messages, contributing to unnecessary use of bandwidth. Users should be educated on what type of e-mail to ignore or delete.
- e-Mail users should take note of the size of attachments and reduce the file size where possible e.g. converting images to .jpg format or zipping files.
- All e-mail should have relevant subject lines and follow a thread of discussion.
- To mitigate the risks associated with the use of e-mail, users should be educated about security and personal risks associated with the use thereof.
- An Acceptable Use Policy (AUP) in a school should specify when and what purpose the use of e-mail is acceptable and have steps in place to ensure compliance.

○ **Internet sites (World Wide Web)**

Description: The Internet, in particular the World Wide Web, is a global set of interconnected computer networks using a protocol which allows them to connect to each other. It provides a platform for a massive library of current, relevant and pertinent information in a variety of formats e.g. video clips, images, presentations, text, spreadsheets also communication tools such as e-Mail, chat rooms, forums, blogs etc.

Uses: The main goal of Internet access in education is to enrich and extend learning through access to information, also enhance communications and sharing. Collaboration in the online environment allows both teachers and learners to be global citizens through being able to quickly and easily communicate across the world as well as developing their skills for the 21st century.

Advantages:

- Access to a range of resources in the education environment as well as generally.
- Access to current information and the ability to keep track of rapidly changing situations – an advantage over print material which can be slow and expensive to update (excluding newspapers).
- The ability to communicate with others in online forums and other social networks. Such communication is not limited to the purely social, but can be used to support professional development as well as lifelong learning.
- The opportunity to broadcast opinions and information in the form of articles published on blogs and other websites.
- Sharing of teacher developed resources that have been peer reviewed, or with websites that have been evaluated by the education community,
- The opportunity to build lifelong research skills.
- The ability to interact with people from all over the world and be exposed to new points of view, alternative perspectives and other cultures (Communities of Practice – COP's).

Considerations:

- Anybody can create a website and upload information either true or not, unlike a traditional library whereby books go through an editorial and selection process thus ensuring a measure of quality control.
- Inappropriate material can be accessed online very easily, both deliberately as well as inadvertently. Users need to be aware that their use can be monitored and they can be identified for inappropriate use. Users of the Internet create a digital trail which cannot be erased.

- Creating White lists, or pre-screened lists of Internet sites, is appropriate in some instances but it must be remembered that learners must be educated to manage the Internet even when away from the protected environment of a school.
- Digital literacy, i.e. the ability to find, discern, select and use online information appropriately is a skill that needs to be taught. If learners do not understand that much of the information on the Internet is opinion not fact they will be the victims of misinformation.
- Modifying work without permission can affect the reputation of the author. Permission should be sought.
- The erroneous assumption that digital resources carry more credibility.
- Misuse of access to the Internet can cost the school both bandwidth as well as working time on the part of both learners and teachers.

Recommendations:

- All schools should have an information literacy plan in place whereby learners and teachers are taught how to find, evaluate and use the range of information resources available.
- All methods which limit access – whether lists of suitable sites, lists of blocked sites, or lists of unsuitable words, should be developed with the input of teachers who will be affected.
- Careful thought should be given to the process whereby these lists and limitations are managed and adjusted so that they do not adversely affect the ability of teachers to teach.
- The content of web pages or web searches can be filtered for unsuitable words using forensic software or firewalls, but care should be taken these do not impact on legitimate use. For example, blocking the word “breast” would make it impossible for anyone to find information on “breast cancer”.
- White lists or pre-screened internet sites can be uploaded onto a school server.
- Shortcuts to useful, interesting and popular sites that are appropriate to the learner’s age can be placed on the desktop of each computer.
- Browsers come with built-in safety parental control features; parents/guardians can protect the computers in the home through using these.
- Having computer screens in public place minimises the temptation to misuse access.
- Software can be installed so that all computers are “set to default” each morning. This will delete unauthorised material from the computers.
- Applying rating settings on browsers, checking the cache (visited sites) in the browser and password protecting computers are all measures which can be taken.
- Checking the history of sites visited can be a useful tool in managing user access and misuse.
- Making sure that learners know that their use is monitored and that they have to take responsibility for how they use the Internet.
- Phishing and spoof sites. To avoid these dangers, users are advised to:
 - Log off after using a site especially on a public computer as found in an Internet Café or school computer room,
 - Avoid clicking a URL link in an email
 - Check for a padlock in the address bar of the browser if it is a financial site,
 - Look for the https in the site address, this versus http which is insecure
 - Change passwords and PIN numbers regularly.
- An Acceptable Use Policy (AUP) needs to be in place and have steps in place to ensure compliance in order that users accept their responsibility for their use of the Internet

- **Social Media and Social Networking**

Description:

Social Media: refers to the platforms that make it possible for users to actively participate online by creating their own online presence, and communicating with others. User-created communication and content that may take the form of video, audio, text or multimedia that is published and shared in a social environment,

such as a blog, wiki, forum, podcast, social bookmarking or video hosting site. Access can be either on using an online computer or using mobile devices such as cell phones.

Social Networking: online platforms that provide means of personal communications between participants such as FaceBook, Linked In, Twitter, Buzz and many others

Uses:

- Participating in online communities that share an interest – to gain or share knowledge.
- When used positively the social media platforms allow people to share music, art, video, opinion, collaborate on work or have discussions and learn from one another.
- Socialising: keeping in touch with existing friends and finding new friends. A channel for the promotion of a cause or product.
- Social media platforms allow users to link up with each other quickly and effectively. This can be particularly effective in the professional environment.
- Individuals can use social media to further their personal or professional goals e.g.
 - Creating and managing their online presence to form an impressive online CV
 - Communicating their opinions, values, and experiences
- Sharing information, pictures, activities, resources and websites can assist lifelong learning and create Communities of Practice (CoP's).

Advantages:

- There can be opportunity for substantial professional growth as members of the group are kept abreast of the latest developments and the views of thought leaders.
- Users can create an impressive online presence to further their professional goals – for example, writing a blog in the area you specialise in to prove your expertise.
- A way of connecting and reconnecting with people.
- Users of these social media platforms have the ability to create their own material and post whatever they like in the platform of their choice e.g. films, magazines or text.
- When used positively the social media platforms allow people to share music, art, video, opinion, collaborate on work or have discussions and learn from one another.

Considerations:

- As with all online communication tools the social media environment has to be managed so that it does not become all consuming.
- Cognisance must be given to Copyright law when sharing these media.
- Modifying work without permission can affect the reputation of the author. Permission should be sought
- Like e-mail etc, issues of privacy and circumspection apply as any communication can be forwarded and very often credit is not given to the source.
- Social media networks are often visible to people from the user's professional as well as personal life. This blurring of social and professional lines can result in embarrassing or otherwise inappropriate revelations. For example – if a teacher “friends” learners on Facebook, they should be aware of what aspects of their profile are visible to the learners.
- Online stalking, harassment and bullying can occur, with resulting emotional stress.
- Naive users may fall prey to hackers, phishers and other online scams.
- Users should take care to familiarise themselves with the privacy settings, and avoid sharing any information that they don't wish to be publically available.
- Users should take care not to share compromising images or inappropriate messages that may damage their reputations later in life (creating a digital CV).
- Users should be aware that behaviour on sites may or may not be moderated, and content is usually uncensored.
- Social networking platforms can be bandwidth intensive.

Recommendations:

- Activity is advised for professional purposes in the education environment.
- Learners should be taught critical thinking skills and digital literacy to enable them to navigate safely through this online world.
- It offers a variety of privacy settings and again, circumspect use of the site is advised.
- Learners should be sensitised to the appropriate etiquette for each online environment, and be made aware of the consequences of misbehaviour.
- Learners should be made aware of the consequences of their use of social media, and encouraged to act responsibly.
- An Acceptable Use Policy (AUP) in a school should specify when and for what purposes the use of social media platforms are acceptable in a school.

Online gaming

Description:

An online game is a game played over some form of computer network. Online games can range from simple text based games to games incorporating complex graphics and virtual worlds populated by many players simultaneously. Many online games have associated online communities, making online games a form of social activity beyond single player games.

Uses: These can be educational e.g. Teen Second Life ages 13 -17 whereby learners create avatars, or online personas which can explore, meet other residents, socialise, participate in individual and group activities, and create and trade virtual property and services with one another, or travel throughout the world (which residents refer to as "the grid"). Epistemic games offer an opportunity to build bridges between theory and practice. These games could also afford learners the opportunity to see what it is like being a scientist or doctor, etc.

Advantages:

- Developing computer skills and interacting online.
- Learning in a fun and interactive way.
- Developing social and problem skills in a more contextualised environment.
- Learning 21st century skills:

Disadvantages:

- Can form addictive behaviour and also impact on social behaviour especially if content is particularly violent/sexual in nature.
- Games, particularly games that aim to teach and not simply entertain are difficult to design and develop.
- Developing games are expensive and time consuming.
- Online gaming can also be a drain on networking resources.

Recommendations:

- Games should have clear educational goals.
- Games need to be developed that provide learners with a safe environment in which to learn and explore.
- We need to not only educate our learners in using technology but also how to use it ethically and responsibly.
- Develop epistemic games to embody professional occupations and help learners learn these cultures that define their community of practice (CoP's).
- Games can help prepare learners for a global world, of dynamic change and possibility. An Acceptable Use Policy (AUP) in a school should specify when and what purposes the participation in online gaming is acceptable in a school.

What is Copyright?

The South African Copyright Law No. 98 of 1978 (as amended) gives authors and creators a “bundle” of special or exclusive rights over their original works which they create.

What works are protected under copyright?

Literary, musical and artistic works; cinematograph films, sound recordings, broadcasts, programme-carrying signals, computer programs and published editions.

What are the rights of authors and creators?

They have the sole or exclusive right to authorise that their works be –

- Reproduced in any manner or form;
- Published;
- Performed in public;
- Broadcast;
- Transmitted in a diffusion service
- Adapted/Translated

Copyright provides authors and creators with an incentive to create new works and to benefit financially from them.

How long are works protected by copyright?

Subject to exceptions depending on the category of work, the term of copyright protection is the lifetime of the author/creator plus 50 years from the end of the year in which the author dies. The publisher also has copyright in the published version for 50 years from the end of the year in which the edition is first published. When this period has expired, the work goes into the public domain, which means that it can be used and reproduced freely.

May users of information use and reproduce copyrighted works?

Yes, the Copyright law has some “limitations and exceptions” to the exclusive rights of the author.

Section 12(1) of the Copyright Act allows “Fair Dealing”. Fair Dealing is not defined in the act, so one has to use one’s discretion when using other people’s intellectual property. Anyone may make a reasonable portion of a work (with proper acknowledgement), for the following purposes, without having to apply for copyright permission:

- for research or private study,
- for personal or private use,
- for criticism or review
- for reporting current events (such as in a newspaper or broadcast),

Section 12 (2-4) allows copying, without permission –

- for using the work for judicial proceedings, or for a report of such proceedings,
- for quotation,
- “by way of illustration” for teaching purposes (such as placing an extract of a work on an overhead projector or in a PowerPoint presentation, to highlight aspects of a lecture or training session).

Section 12 (5-11) have other exceptions.

Can educators/learners copy for teaching/educational purposes?

Yes, in terms of Section 13 (Copyright Regulations), a teacher may give a limited number of separate/single handouts to learners in a classroom situation without having to get permission. The copies, however, may

not be included in compilations (e.g. study-packs/course-packs) or handed out with other copyrighted material.

There are a lot of publications and digital works that allow reproduction for non-commercial or educational purposes, without having to get permission. You would need to check the copyright notices inside the printed publications or read the copyright notices on websites. There is also a great deal of free material on the Web. However, remember not all material on the Web is free. Many websites and electronic databases have strict copyright conditions and you may only use or copy their material in terms of their licence agreements. Proper acknowledgement must always be given, even if the material is free.

Without first obtaining copyright permission, you would be infringing the Copyright law if you were to -

- copy a whole book or journal, or major portion of a book or journal (including an out-of-print book), except in very special circumstances,
- copy sheet music, commercial audiotapes, videos, CDs, DVDs, films or other original works,
- translate, adapt, modify or convert material into alternative formats (even for persons with sensory disabilities),
- make copies, beyond the amounts permitted in under Fair Dealing (Section 12) and the Copyright Regulations (Section 13),
- scan, digitise or place material on the Web, where permission is specifically required,
- download multiple copies of material from electronic databases or the Internet, where permission is specifically required,
- play copyrighted music or perform a copyrighted musical for a public audience,
- perform a copyrighted play or drama,
- show a video, film or DVD to a public audience, if not specifically allowed for educational purposes,
- create, replace or substitute anthologies, compilations or collective works,
- make copies of, or from, works intended to be ephemeral, including workbooks, exercises, standardized tests, test booklets and answer sheets, or similar ephemeral material,
- make copies to substitute for the purchase of books, publishers' reprints or periodicals,
- leave copies of copyrighted works for users/learners to copy from,
- make a backup copy of a computer program or an authorized copy, other than for personal or private purposes.

May a librarian make copies for teachers or library users?

Yes, a librarian may make a single copy of a reasonable portion of a work for a teacher or other library user, as long as it is for research or private use. A librarian may also obtain a single copy for a teacher or library user via interlibrary loans. However, a librarian may not make multiple copies for a teacher or other library users.

May librarians make copies for preservation and interlibrary loans purposes?

Yes, the following sub-clauses provide for some exceptions -

- Sub-clause 3(d), (e) and (h) applies to preservation and/or replacement of works, with conditions
- Sub-clause 3(f) applies to Interlibrary Loans

A librarian may make a copy or obtain an ILL copy for a user, but may not make multiple copies for a user, without permission.

Do libraries need to place copyright warnings near copying equipment?

Section 13(6) of the Act requires libraries and archives to place a copyright warning at the place where orders for copies are accepted by libraries and archives. This warning must be incorporated in all forms supplied by libraries and archives and used by their users or the general public for ordering copies. The copyright warning must also be placed where unsupervised copying equipment is located.

N.B. Article 6 (1) of Section 13 of the Copyright Act requires that the following Copyright Warning Notice should be displayed at the place where orders for copies are accepted by libraries or archive depots. It should also be incorporated in all forms supplied by libraries or archive depots and used by users for ordering copies.

The Notice should be printed on heavy paper or other durable material in type at least 18 points in size, and should be displayed prominently, in such manner and position as to be clearly visible, legible and comprehensible to a casual observer in the immediate vicinity of the place where orders are accepted or where unsupervised equipment is located.

COPYRIGHT WARNING

The Copyright Act, 1978 governs the making of photocopies of other reproductions of copyrighted material. Under the provisions of the Act, libraries and archive depots are authorized to supply photocopies or other reproductions. One of the provisions is that the photocopy or reproduction is not to be used for any purposes other than private study or personal or private use.

If a user makes a request for, or later uses, a photocopy or reproduction for purposes not permitted by the Act, that user may be liable for copyright infringement. This institution reserves the right to refuse to accept a copying order if, in its opinion, fulfilment of the order might involve violation of the Act.

How does infringement affect the author or creator?

If their works are copied illegally, their works are not purchased, so they lose out on sales. This has a direct impact on their income. Prices of publications and other works increase as a result. It also discourages authors from creating new works, which could result in a shortage of publications.

How does one apply for permission?

One would need to apply for permission directly to the publisher, Webmaster, newspaper editor, database supplier, film director, artist, broadcaster, computer director/programmer, e-database provider, or other copyright owners, as the case may be. For permission specifically to make photocopies, one can apply to DALRO, the Dramatic, Artistic and Literary Rights Organization, in Johannesburg. To copy music, one can apply to SAMRO, the South African Music Rights Organization, in Johannesburg. The telephone number for DALRO and SAMRO is 011-712-8000.
